

Respirafect®

Lung Infections

Combats lung and bronchial infections with a specific healing action that soothes and reduces inflammation.

For cold and flu sufferers:

- Who are looking for an antimicrobial herbal tincture formula specifically geared to the treatment of lung and bronchial infections
- Who want to deal effectively with symptoms such as excess mucus that accompany lung and bronchial conditions
- Those seeking a product that soothes and heals, reducing respiratory inflammation and helping lungs expel sticky, glutinous mucus
- Those wanting help with the respiratory infections that often accompany coughs, making **Respirafect®** an excellent companion product to **Respiracleanse®**, our cough formula

Its Herbs and How They Work

- Featuring a bedrock of two species of **echinacea**, i.e. a proprietary blend of *Echinacea angustifolia* root and *Echinacea purpurea* root, leaf and seed, a robust, synergistic combination with demonstrable antiseptic, immune-enhancing properties
- A formula highlighted by **usnea**, an immunostimulatory herb whose usnic acid constituent has been shown to have marked antibiotic properties even in high dilutions
- Reinforced by **osha**, an antiseptic bronchial restorative herb native to the Rocky Mountains
- Further aided by **plantain**, an antibacterial, anti-inflammatory herb with significant effectiveness in the treatment of chronic bronchitis
- Includes **elecampane**, an antibacterial herb specific to persistent, wet, bronchial coughs, as it combines the relaxing effects of mucilage with the stimulatory properties of its essential oils
- Enhanced by **mullein**, a herb with antiseptic, anti-inflammatory, and pain-relieving properties and long valued as a cough remedy especially useful for bronchitis
- With **licorice**, which enjoys a healing action that soothes the mucous membranes of the throat and lungs and amplifies the therapeutic properties of other herbs in the formula

Respirafect® is non-GMO, organic/wildcrafted, gluten-free, and soy-free.

Respirafect®

Lung Infections

Combats lung and bronchial infections with a specific healing action that soothes and reduces inflammation.

The difference between Respirafect and Respiracleanse. How do I know when to use one rather than the other?

In most instances, these two products are complementary and work together to achieve respiratory balance. There are, however, points of emphasis particular to each of them.

As you might gather from the name, **Respirafect®** is geared more to lung infections. **Respirafect®** combats the infection, offering soothing action that reduces inflammation and helps the lungs expel sticky, glutinous mucus. In the minority of cases, where infections are simply associated with loose, easily-expectorated mucus, **Respirafect®** can be used on its own.

More commonly, infections are accompanied by more harsh, dry and irritating coughs or with difficult to expectorate mucus, in which cases the ideal approach is to pursue a strategy that combines these two lung products. This being the case, we often recommend a regimen of treatment that involves taking these two products alternately—sometimes on the hour at the outset of a bout of respiratory illness.

UPC	Code	Herbal Formula	Size (mL)
813858009633	0963	Respirafect®	50
813858009640	0964	Respirafect®	100
813858009657	0965	Respirafect®	250
